

Lab 1C

1c_readme.md

```
# Lab 1C – Terraform: EC2 → RDS + Secrets/Params + Observability + Incident Alerts
```

Purpose

Modern companies do not build AWS by clicking around in the console.

They use Infrastructure as Code (IaC) so environments are repeatable, reviewable, auditable, and recoverable.

This repo is intentionally incomplete:

- It declares required resources
- Students must configure the details (rules, policies, user_data, app logging, etc.)

Requirements (must exist in Terraform)

- VPC, public/private subnets, IGW, NAT, routing
- EC2 app host + IAM role/profile
- RDS (private) + subnet group + SG with inbound from EC2 SG
- Parameter Store values (/lab/db/*)
- Secrets Manager secret (db creds)
- CloudWatch log group
- CloudWatch alarm (DBConnectionErrors >= 3 per 5 min)
- SNS topic + subscription

Student Deliverables

- `terraform plan` output
- `terraform apply` evidence (outputs)
- CLI verification commands (from Lab 1b)
- Incident runbook execution notes (alarm fired + recovered)

Lab 1C Errors Encountered with Terraform

Notes

- 3: Designing_with_POWER!!!!
- 2: second_note
- 1: I_will_Win

Lab 1C Success Log (January 11, 2026)

Lab C Terraform Success Log

Lab C Bonus A

Lab C Bonus A

Lab C Bonus B

Lab C Bonus B

I need to add in here for the one that after I deleted my secret I had to recreate a new secret and then in the correspondence of updating the user data so that the secrets would continue to connect so I don't run into that same init error again
